

AxCrypt

How it works

AxCrypt is a file-based encryption software, which uses a password to transform files into AES-256 bit encrypted files, safe for cloud storage and transmission.

1. Select files to secure

2. Encrypt

3. Share your secured files

Our vision

- File Security Made Easy

Security

Security is crucial to us. Everything we do with AxCrypt is done with security as the highest priority. We make sure that no one ever gets access to your encrypted files, as long as you have control of your own password.

Reliability

AxCrypt has been on the market for 17 years, and has grown to become one of the world's most popular encryption softwares with more than 20 million downloads. Over the years we have also been mentioned and rated by many as one of the world's best softwares for encryption.

Simplicity

Encryption is complicated, but this has not prevented us from constantly working to simplify it for the user. We have developed unique features that make the use of strong encryption and the sharing of encryption keys more simple and secure than any other software.
